

Snowberry Symphoricarpos albus

Height: 3 feet

Spread: 3 feet

Sunlight: O

Hardiness Zone: 4a

## **Description:**

A durable and hardy small shrub which produces small pink flowers and showy white berries in fall and into winter; incredibly adaptable to poor conditions, performs well in shade; bushy habit, tends to sucker, good for filling in a tough spot

## **Ornamental Features**

Snowberry is primarily grown for its highly ornamental fruit. It features an abundance of magnificent white berries from early to late fall. It has bluish-green deciduous foliage. The pointy leaves do not develop any appreciable fall colour.

## Landscape Attributes

Snowberry is a dense multi-stemmed deciduous shrub with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

## **Planting & Growing**

Snowberry will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub performs well in both full sun and full shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America.
