### Scandia Juniper

*Juniperus sabina 'Skandia'*

Height: 11 inches

Spread: 5 feet

Sunlight: ☉

Hardiness Zone: 3a

#### Description:

A stunning groundcover evergreen for general landscape use; attractive dusty green foliage and a soft texture, wide spreading with gently arching branches; excellent in massing and groupings or as a groundcover, lower growing than Arcadia

#### Ornamental Features

Scandia Juniper has attractive grayish green foliage. The scale-like leaves are highly ornamental and remain grayish green throughout the winter. It produces blue berries from late spring to late winter. The flowers are not ornamentally significant.

#### Landscape Attributes

Scandia Juniper is a multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Scandia Juniper is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

### **Planting & Growing**

Scandia Juniper will grow to be about 11 inches tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
