Golden Spice Pear

Pyrus ussuriensis 'Golden Spice'

Height: 24 feet

Spread: 13 feet

Sunlight:

Hardiness Zone: 3a

Description:

This home orchard tree features showy white flowers in spring, good fall color and consistent oval shape; small firm yellow fruit is of reasonable quality, best for canning; fallen fruit can be messy.

Edible Qualities

Golden Spice Pear is a small tree that is commonly grown for its edible qualities. It produces yellow oblong pears (which are botanically known as 'pomes') with a red blush and white flesh which are usually ready for picking from late summer to early fall. The fruit will often fade to gold over time. The pears have a sweet taste and a crisp texture.

The pears are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Canning

Features & Attributes

Golden Spice Pear is smothered in stunning clusters of white flowers with purple anthers along the branches in mid spring. It has dark green deciduous foliage. The glossy oval leaves turn an outstanding burgundy in the fall. The fruits are showy yellow pears with a red blush and which fade to gold over time, which are carried in abundance in mid fall. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a dense deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Aside from its primary use as an edible, Golden Spice Pear is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

Planting & Growing

Golden Spice Pear will grow to be about 24 feet tall at maturity, with a spread of 13 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 70 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
